Passed audits (18)

^

● Eliminate render-blocking resources

^

Resources are blocking the first paint of your page. Consider delivering critical JS/CSS inline and deferring all non-critical JS/styles. [Learn more.](#) FCP LCP

● Properly size images

^

Serve images that are appropriately-sized to save cellular data and improve load time. [Learn more.](#)

● Minify CSS

^

Minifying CSS files can reduce network payload sizes. [Learn more.](#) FCP LCP

● Minify JavaScript

^

Minifying JavaScript files can reduce payload sizes and script parse time. [Learn more.](#) FCP LCP

● Efficiently encode images

^

Optimized images load faster and consume less cellular data. [Learn more.](#)

● Serve images in next-gen formats – Potential savings of 39 KiB

^

Image formats like WebP and AVIF often provide better compression than PNG or JPEG, which means faster downloads and less data consumption. [Learn more.](#)

☒ Show 3rd-party resources (1)

URL	Resource Size	Potential Savings
-----	---------------	-------------------

URL	Resource Size	Potential Savings
data:image/png;base64,iVBORw0KG...	49.2 KiB	38.9 KiB

● Enable text compression ^

Text-based resources should be served with compression (gzip, deflate or brotli) to minimize total network bytes. [Learn more.](#) FCP LCP

● Preconnect to required origins ^

Consider adding `preconnect` or `dns-prefetch` resource hints to establish early connections to important third-party origins. [Learn more.](#) FCP LCP

● Avoid multiple page redirects — Potential savings of 630 ms ^

Redirects introduce additional delays before the page can be loaded. [Learn more.](#) FCP LCP

☐ Show 3rd-party resources (0)

URL	Time Spent
http://tassentraum.de	630 ms
https://www.tassentraum.de	0 ms

● Preload key requests ^

Consider using `` to prioritize fetching resources that are currently requested later in page load. [Learn more.](#) FCP LCP

● Use video formats for animated content ^

Large GIFs are inefficient for delivering animated content. Consider using MPEG4/WebM videos for animations and PNG/WebP for static images instead of GIF to save network bytes. [Learn more](#) LCP

● Remove duplicate modules in JavaScript bundles ^

Remove large, duplicate JavaScript modules from bundles to reduce unnecessary bytes consumed by network activity. [TBT](#)

● Preload Largest Contentful Paint image ^

Preload the image used by the LCP element in order to improve your LCP time. [Learn more.](#) [LCP](#)

● Avoids enormous network payloads — Total size was 403 KiB ^

Large network payloads cost users real money and are highly correlated with long load times. [Learn more.](#) [LCP](#)

☒ Show 3rd-party resources (9)

● Avoids an excessive DOM size — 462 elements ^

A large DOM will increase memory usage, cause longer [style calculations](#), and produce costly [layout reflows](#). [Learn more](#). TBT

Statistic	Element	Value
Total DOM Elements		462
Maximum DOM Depth	 <div>Ja </div>	16
Maximum Child Elements	 <div>body#tassen-traum-personalisierte-tassen <body id="tassen-traum-personalisierte-tassen" class="template-index data-animations" data-gpo-is-enabled="true"></div>	25

● Lazy load third-party resources with facades ^

Some third-party embeds can be lazy loaded. Consider replacing them with a facade until they are required. [Learn more.](#) TBT

● Uses passive listeners to improve scrolling performance ^

Consider marking your touch and wheel event listeners as `passive` to improve your page's scroll performance. [Learn more.](#)

Accessibility

These checks highlight opportunities to [improve the accessibility of your web app](#). Only a subset of accessibility issues can be automatically detected so manual testing is also encouraged.

ARIA — These are opportunities to improve the usage of ARIA in your application which may enhance the experience for users of assistive technology, like a screen reader.

▲ `[aria-hidden="true"]` elements contain focusable descendents ^

Focusable descendents within an `[aria-hidden="true"]` element prevent those interactive elements from being available to users of assistive technologies like screen readers. [Learn more.](#)

Additional items to manually check (10) — These items address areas which an automated testing tool cannot cover. Learn more in our guide on [conducting an accessibility review](#).

● **The page has a logical tab order** ^

Tabbing through the page follows the visual layout. Users cannot focus elements that are offscreen. [Learn more](#).

● **Interactive controls are keyboard focusable** ^

Custom interactive controls are keyboard focusable and display a focus indicator. [Learn more](#).

● **Interactive elements indicate their purpose and state** ^

Interactive elements, such as links and buttons, should indicate their state and be distinguishable from non-interactive elements. [Learn more](#).

● **The user's focus is directed to new content added to the page** ^

If new content, such as a dialog, is added to the page, the user's focus is directed to it. [Learn more](#).

● **User focus is not accidentally trapped in a region** ^

A user can tab into and out of any control or region without accidentally trapping their focus. [Learn more](#).

● **Custom controls have associated labels** ^

Custom interactive controls have associated labels, provided by aria-label or aria-labelledby. [Learn more](#).

● **Custom controls have ARIA roles** ^

Custom interactive controls have appropriate ARIA roles. [Learn more](#).

● **Visual order on the page follows DOM order** ^

DOM order matches the visual order, improving navigation for assistive technology. [Learn more](#).

● **Offscreen content is hidden from assistive technology** ^

Offscreen content is hidden with display: none or aria-hidden=true. [Learn more.](#)

● HTML5 landmark elements are used to improve navigation ^

Landmark elements (<main>, <nav>, etc.) are used to improve the keyboard navigation of the page for assistive technology. [Learn more.](#)

Passed audits (20) ^

● [aria-*] attributes match their roles ^

Each ARIA `role` supports a specific subset of `aria-*` attributes. Mismatching these invalidates the `aria-*` attributes. [Learn more.](#)

● [aria-hidden="true"] is not present on the document <body> ^

Assistive technologies, like screen readers, work inconsistently when `aria-hidden="true"` is set on the document `<body>`. [Learn more.](#)

● [role]s have all required [aria-*] attributes ^

Some ARIA roles have required attributes that describe the state of the element to screen readers. [Learn more.](#)

● [role] values are valid ^

ARIA roles must have valid values in order to perform their intended accessibility functions. [Learn more.](#)

● [aria-*] attributes have valid values ^

Assistive technologies, like screen readers, can't interpret ARIA attributes with invalid values. [Learn more.](#)

● Buttons have an accessible name ^

When a button doesn't have an accessible name, screen readers announce it as "button", making it unusable for users who rely on screen readers. [Learn more](#).

● **The page contains a heading, skip link, or landmark region** ^

Adding ways to bypass repetitive content lets keyboard users navigate the page more efficiently. [Learn more](#).

● **Document has a `<title>` element** ^

The title gives screen reader users an overview of the page, and search engine users rely on it heavily to determine if a page is relevant to their search. [Learn more](#).

● **`[id]` attributes on active, focusable elements are unique** ^

All focusable elements must have a unique `id` to ensure that they're visible to assistive technologies. [Learn more](#).

● **ARIA IDs are unique** ^

The value of an ARIA ID must be unique to prevent other instances from being overlooked by assistive technologies. [Learn more](#).

● **Heading elements appear in a sequentially-descending order** ^

Properly ordered headings that do not skip levels convey the semantic structure of the page, making it easier to navigate and understand when using assistive technologies. [Learn more](#).

● **`<html>` element has a `[lang]` attribute** ^

If a page doesn't specify a lang attribute, a screen reader assumes that the page is in the default language that the user chose when setting up the screen reader. If the page isn't actually in the default language, then the screen reader might not announce the page's text correctly. [Learn more](#).

● **`<html>` element has a valid value for its `[lang]` attribute** ^

Specifying a valid [BCP 47 language](#) helps screen readers announce text properly. [Learn more](#).

● **Image elements have `[alt]` attributes** ^

Informative elements should aim for short, descriptive alternate text. Decorative elements can be ignored with an empty alt attribute. [Learn more](#).

● **Form elements have associated labels** ^

Labels ensure that form controls are announced properly by assistive technologies, like screen readers. [Learn more](#).

● **Links have a discernible name** ^

Link text (and alternate text for images, when used as links) that is discernible, unique, and focusable improves the navigation experience for screen reader users. [Learn more](#).

● **Lists contain only `` elements and script supporting elements (`<script>` and `<template>`).** ^

Screen readers have a specific way of announcing lists. Ensuring proper list structure aids screen reader output. [Learn more](#).

● **List items (``) are contained within `` or `` parent elements** ^

Screen readers require list items (``) to be contained within a parent `` or `` to be announced properly. [Learn more](#).

● **`[user-scalable="no"]` is not used in the `<meta name="viewport">` element and the `[maximum-scale]` attribute is not less than 5.** ^

Disabling zooming is problematic for users with low vision who rely on screen magnification to properly see the contents of a web page. [Learn more](#).

● **No element has a `[tabindex]` value greater than 0** ^

A value greater than 0 implies an explicit navigation ordering. Although technically valid, this often creates frustrating experiences for users who rely on assistive technologies.

[Learn more.](#)

Not applicable (21)

● [\[accesskey\]](#) values are unique

Access keys let users quickly focus a part of the page. For proper navigation, each access key must be unique. [Learn more.](#)

● [button](#), [link](#), and [menuitem](#) elements have accessible names

When an element doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. [Learn more.](#)

● ARIA input fields have accessible names

When an input field doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. [Learn more.](#)

● ARIA [meter](#) elements have accessible names

When an element doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. [Learn more.](#)

● ARIA [progressbar](#) elements have accessible names

When a `progressbar` element doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. [Learn more.](#)

● Elements with an ARIA [\[role\]](#) that require children to contain a specific [\[role\]](#) have all required children.

Some ARIA parent roles must contain specific child roles to perform their intended accessibility functions. [Learn more.](#)

● [\[role\]](#)s are contained by their required parent element

Some ARIA child roles must be contained by specific parent roles to properly perform their intended accessibility functions. [Learn more](#).

● **ARIA toggle fields have accessible names** ^

When a toggle field doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. [Learn more](#).

● **ARIA `tooltip` elements have accessible names** ^

When an element doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. [Learn more](#).

● **ARIA `treeitem` elements have accessible names** ^

When an element doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. [Learn more](#).

● **`<dl>`'s contain only properly-ordered `<dt>` and `<dd>` groups, `<script>`, `<template>` or `<div>` elements.** ^

When definition lists are not properly marked up, screen readers may produce confusing or inaccurate output. [Learn more](#).

● **Definition list items are wrapped in `<dl>` elements** ^

Definition list items (`<dt>` and `<dd>`) must be wrapped in a parent `<dl>` element to ensure that screen readers can properly announce them. [Learn more](#).

● **No form fields have multiple labels** ^

Form fields with multiple labels can be confusingly announced by assistive technologies like screen readers which use either the first, the last, or all of the labels. [Learn more](#).

● **`<frame>` or `<iframe>` elements have a title** ^

Screen reader users rely on frame titles to describe the contents of frames. [Learn more](#).

● **`<input type="image">` elements have `[alt]` text** ^

When an image is being used as an `<input>` button, providing alternative text can help screen reader users understand the purpose of the button. [Learn more](#).

● **The document does not use `<meta http-equiv="refresh">`** ^

Users do not expect a page to refresh automatically, and doing so will move focus back to the top of the page. This may create a frustrating or confusing experience. [Learn more.](#)

● **<object> elements have [alt] text** ^

Screen readers cannot translate non-text content. Adding alt text to `<object>` elements helps screen readers convey meaning to users. [Learn more.](#)

● **Cells in a <table> element that use the [headers] attribute refer to table cells within the same table.** ^

Screen readers have features to make navigating tables easier. Ensuring `<td>` cells using the `[headers]` attribute only refer to other cells in the same table may improve the experience for screen reader users. [Learn more.](#)

● **<th> elements and elements with [role="columnheader"/"rowheader"] have data cells they describe.** ^

Screen readers have features to make navigating tables easier. Ensuring table headers always refer to some set of cells may improve the experience for screen reader users. [Learn more.](#)

● **[lang] attributes have a valid value** ^

Specifying a valid [BCP 47 language](#) on elements helps ensure that text is pronounced correctly by a screen reader. [Learn more.](#)

● **<video> elements contain a <track> element with [kind="captions"]** ^

When a video provides a caption it is easier for deaf and hearing impaired users to access its information. [Learn more.](#)

Best Practices

Trust and Safety

▲ Does not use HTTPS – 1 insecure request found

All sites should be protected with HTTPS, even ones that don't handle sensitive data. This includes avoiding [mixed content](#), where some resources are loaded over HTTP despite the initial request being served over HTTPS. HTTPS prevents intruders from tampering with or passively listening in on the communications between your app and your users, and is a prerequisite for HTTP/2 and many new web platform APIs. [Learn more.](#)

▲ Includes front-end JavaScript libraries with known security vulnerabilities — 4 vulnerabilities detected

Some third-party scripts may contain known security vulnerabilities that are easily identified and exploited by attackers. [Learn more](#).

Library Version	Vulnerability Count	Highest Severity
jQuery@1.9.1	4	Medium

● Ensure CSP is effective against XSS attacks

A strong Content Security Policy (CSP) significantly reduces the risk of cross-site scripting (XSS) attacks. [Learn more](#)

Description	Directive	Severity
script-src directive is missing. This can allow the execution of unsafe scripts.	script-src	High
Elements controlled by object-src are considered legacy features. Consider setting object-src to 'none' to prevent the injection of plugins that execute unsafe scripts.	object-src	High

Description	Directive	Severity
No CSP configures a reporting destination. This makes it difficult to maintain the CSP over time and monitor for any breakages.	report-uri	Medium

Passed audits (14)

● Avoids requesting the geolocation permission on page load

Users are mistrustful of or confused by sites that request their location without context. Consider tying the request to a user action instead. [Learn more.](#)

● Avoids requesting the notification permission on page load

Users are mistrustful of or confused by sites that request to send notifications without context. Consider tying the request to user gestures instead. [Learn more.](#)

● Allows users to paste into password fields

Preventing password pasting undermines good security policy. [Learn more.](#)

● Displays images with correct aspect ratio

Image display dimensions should match natural aspect ratio. [Learn more.](#)

● Serves images with appropriate resolution

Image natural dimensions should be proportional to the display size and the pixel ratio to maximize image clarity. [Learn more.](#)

● Page has the HTML doctype

Specifying a doctype prevents the browser from switching to quirks-mode. [Learn more.](#)

● Properly defines charset

A character encoding declaration is required. It can be done with a `` tag in the first 1024 bytes of the HTML or in the Content-Type HTTP response header. [Learn more](#).

● Avoids `unload` event listeners ^

The ``unload`` event does not fire reliably and listening for it can prevent browser optimizations like the Back-Forward Cache. Consider using the ``pagehide`` or ``visibilitychange`` events instead. [Learn more](#)

● Avoids Application Cache ^

Application Cache is deprecated. [Learn more](#).

● Detected JavaScript libraries ^

All front-end JavaScript libraries detected on the page. [Learn more](#).

Name	Version
jQuery	1.9.1
Shopify	

● Avoids deprecated APIs ^

Deprecated APIs will eventually be removed from the browser. [Learn more](#).

● No browser errors logged to the console ^

Errors logged to the console indicate unresolved problems. They can come from network request failures and other browser concerns. [Learn more](#)

● Page has valid source maps ^

Source maps translate minified code to the original source code. This helps developers debug in production. In addition, Lighthouse is able to provide further insights. Consider deploying source maps to take advantage of these benefits. [Learn more](#).

● No issues in the [Issues](#) panel in Chrome Devtools

Issues logged to the `Issues` panel in Chrome Devtools indicate unresolved problems. They can come from network request failures, insufficient security controls, and other browser concerns. Open up the Issues panel in Chrome DevTools for more details on each issue.

Not applicable (1)

● Fonts with [font-display: optional](#) are preloaded

Preload `optional` fonts so first-time visitors may use them. [Learn more](#)

SEO

These checks ensure that your page is following basic search engine optimization advice. There are many

additional factors Lighthouse does not score here that may affect your search ranking, including performance on [Core Web Vitals](#). [Learn more](#).

Additional items to manually check (1) — Run these additional validators on your site to check additional SEO best practices. ^

● **Structured data is valid** ^

Run the [Structured Data Testing Tool](#) and the [Structured Data Linter](#) to validate structured data. [Learn more](#).

Passed audits (14) ^

● **Has a `<meta name="viewport">` tag with `width` or `initial-scale`** ^

Add a `<meta name="viewport">` tag to optimize your app for mobile screens. [Learn more](#).

● **Document has a `<title>` element** ^

The title gives screen reader users an overview of the page, and search engine users rely on it heavily to determine if a page is relevant to their search. [Learn more](#).

● **Document has a meta description** ^

Meta descriptions may be included in search results to concisely summarize page content. [Learn more](#).

● **Page has successful HTTP status code** ^

Pages with unsuccessful HTTP status codes may not be indexed properly. [Learn more](#).

● **Links have descriptive text** ^

Descriptive link text helps search engines understand your content. [Learn more](#).

● Links are crawlable ^

Search engines may use `href` attributes on links to crawl websites. Ensure that the `href` attribute of anchor elements links to an appropriate destination, so more pages of the site can be discovered. [Learn More](#)

● Page isn't blocked from indexing ^

Search engines are unable to include your pages in search results if they don't have permission to crawl them. [Learn more.](#)

● robots.txt is valid ^

If your robots.txt file is malformed, crawlers may not be able to understand how you want your website to be crawled or indexed. [Learn more.](#)

● Image elements have `[alt]` attributes ^

Informative elements should aim for short, descriptive alternate text. Decorative elements can be ignored with an empty alt attribute. [Learn more.](#)

● Document has a valid `hreflang` ^

hreflang links tell search engines what version of a page they should list in search results for a given language or region. [Learn more.](#)

● Document has a valid `rel=canonical` ^

Canonical links suggest which URL to show in search results. [Learn more.](#)

● Document uses legible font sizes — 99.48% legible text ^

Font sizes less than 12px are too small to be legible and require mobile visitors to “pinch to zoom” in order to read. Strive to have >60% of page text ≥12px. [Learn more.](#)

☒ Show 3rd-party resources (2)

Source	Selector	% of Page Text	Font Size
...assets/theme.scss.css?v=699...:1:72527 (cdn.shopify.com)	.site-footer__copyright small	0.40%	11.2px
...assets/theme.scss.css?v=699...:1:4869 (cdn.shopify.com)	body, button, input, select, textarea	0.12%	10px
Legible text		99.48%	≥ 12px

● Document avoids plugins ^

Search engines can't index plugin content, and many devices restrict plugins or don't support them. [Learn more.](#)

● Tap targets are sized appropriately — 100% appropriately sized tap targets ^

Interactive elements like buttons and links should be large enough (48x48px), and have enough space around them, to be easy enough to tap without overlapping onto other elements. [Learn more.](#)
